**Software Options for the Model 2000
Digital Multimeter (DMM)**

Packing List

TestPoint Runtime

Download the latest version of this free software from the 2000 Series Digital Multimeters web page at www.keithley.com.

TestPoint Runtime is an executable run-time program written in TestPoint, an application development environment for Windows. TestPoint Runtime contains several examples in an easy-to-use point and click application that exercises most of the functionalities of the Model 2000 DMM. The source code for TestPoint Runtime is also provided so you can purchase TestPoint and modify it to fit your application.

TestPoint uses object-oriented, drag-and-drop technology to bring both power and simplicity to data acquisition and test & measurement. TestPoint offers three optional toolkits that can be added to the base version: Internet Toolkit, Database Toolkit, and Statistical Process Control (SPC) Toolkit. Check www.keithley.com or call 1-888-KEITHLEY (534-8453) for more information on TestPoint.
